# Electric Linear Actuators

## FOR TOUGH, INDUSTRIAL AUTOMATION APPLICATIONS

EDrive Actuators, an exclusive brand of Joyce/Dayton, manufactures electric linear actuators for tough, industrial automation applications. Our products are used in a wide variety of industry applications where conservative design, rugged construction, long life, and high precision are required and valued, more specifically, as replacement for older power solutions like hydraulic and pneumatic linear actuators. The demand for electric linear actuators is growing among machine builders who want to improve their performance, reliability, and sustainability. Electric linear actuators provide faster speeds, longer life, and cleaner operation when compared to other types of linear motion systems.

### Benefits of Electric Actuation:

- Cleaner, quieter, and more energy efficient
- Improved performance
- Less maintenance required
- More accuracy and repeatability
- More flexibility and scalability
- Higher speed and force
- Higher system stiffness
- Lower operating costs

**EDrive Actuators, an industry pioneer since 1980 and now exclusive to Joyce/Dayton Corp., delivers precision electromechanical motion.**

Our customers benefit from both standard products and customized designs, backed by Joyce/Dayton's unparalleled expertise since 1873. Get tailored, high-quality electric actuator solutions with U.S. based support.

### Industries Served:

- Agriculture
- Automotive & Transportation
- Defense
- Food & Beverage
- Forestry & Lumber
- Material Handling & Packaging
- Motion Simulators & Entertainment
- And More

# PRODUCTS

Our products are used in a wide variety of industry applications where conservative design, rugged construction, long life, and high precision are required and valued.

## UA Series Actuators

The compact EDRIIVE UA actuators feature an aluminum extrusion cylinder and chrome pistons. They are designed to be easily incorporated into automation applications.

## Tac Series Actuators

EDRIIVE Tac Series actuators provide high quality rugged and durable linear motion for both low and high force applications. Using aluminum bodies with steel components, these more compact sized actuators are a good fit in most linear motion industrial applications.

## Eliminator Series Actuators

EDRIIVE Eliminator Series actuators provide strong, durable, and precise linear motion for industrial automation. They were designed to replace hydraulic actuators and thus “eliminate” many associated concerns, such as noise and fluid leakage.

## IP69K STAINLESS STEEL

EDRIIVE IP69K actuators are strong, durable, and precise linear actuators for high-end applications in areas requiring frequent exposure to high-pressure, high-temperature washdown. Exterior surfaces are constructed of 316 Stainless Steel and are ideally suited for severe environments and caustic wash-down conditions.

## INTERNAL LOAD CELLS

EDRIIVE offers Heavy-Duty linear actuators with Integrated Load Cells which feature bi-directional force feedback. These actuators provide continuous, accurate measurement of applied loads and forces and offer an economical solution for precise applications. Internal Load Cells are available on Eliminator Series actuators.

# Consistent Success IN THE TOUGHEST APPLICATIONS

**EDrive linear actuators** have shown consistent success in the toughest applications, e.g., high loads, high speeds, high precision, and extreme durability. Precision ball screw systems, tailored for maximum life, load and speed, provide the motion while fully enclosed, thus eliminating contamination-related failures. A long bronze nose bearing provides support for the extended piston. Rugged bronze keys in opposing steel slots provide anti-rotation and counter the tangential forces created during high speed, high frequency, and high load operation.

## Eliminator Series Actuator

### EDrive's Eliminator Series Features:

- Capacities up to 100,000 lbs
- Steel or 316 stainless steel
- Standard stroke lengths up to 48"
- Velocity up to 63 in/sec
- Internal Load Cell option

Standard Configurations Include Parallel Offset (1:1 or 2:1) and Inline

Designed to Mount Any Motor

Adjustable Limit Switches Available

Rugged Piston Anti-Rotation Features a Pair of Opposing Keys

Internal Bumper Helps Prevent Jamming at Both Ends of Travel

Long Sleeve Bearing Guides and Supports the Piston

High Capacity Precision Ball Screw and Support Bearing System

Re-Grease Provision from Either Side

High Strength Heavy Wall Steel Cylinder Provides Rigidity, Stability and Protection

Rod Wiper Seal Protects the Internal Components

Chrome Plated, Heavy Wall Steel Piston Provides Rigidity and a Hard Chrome Plate

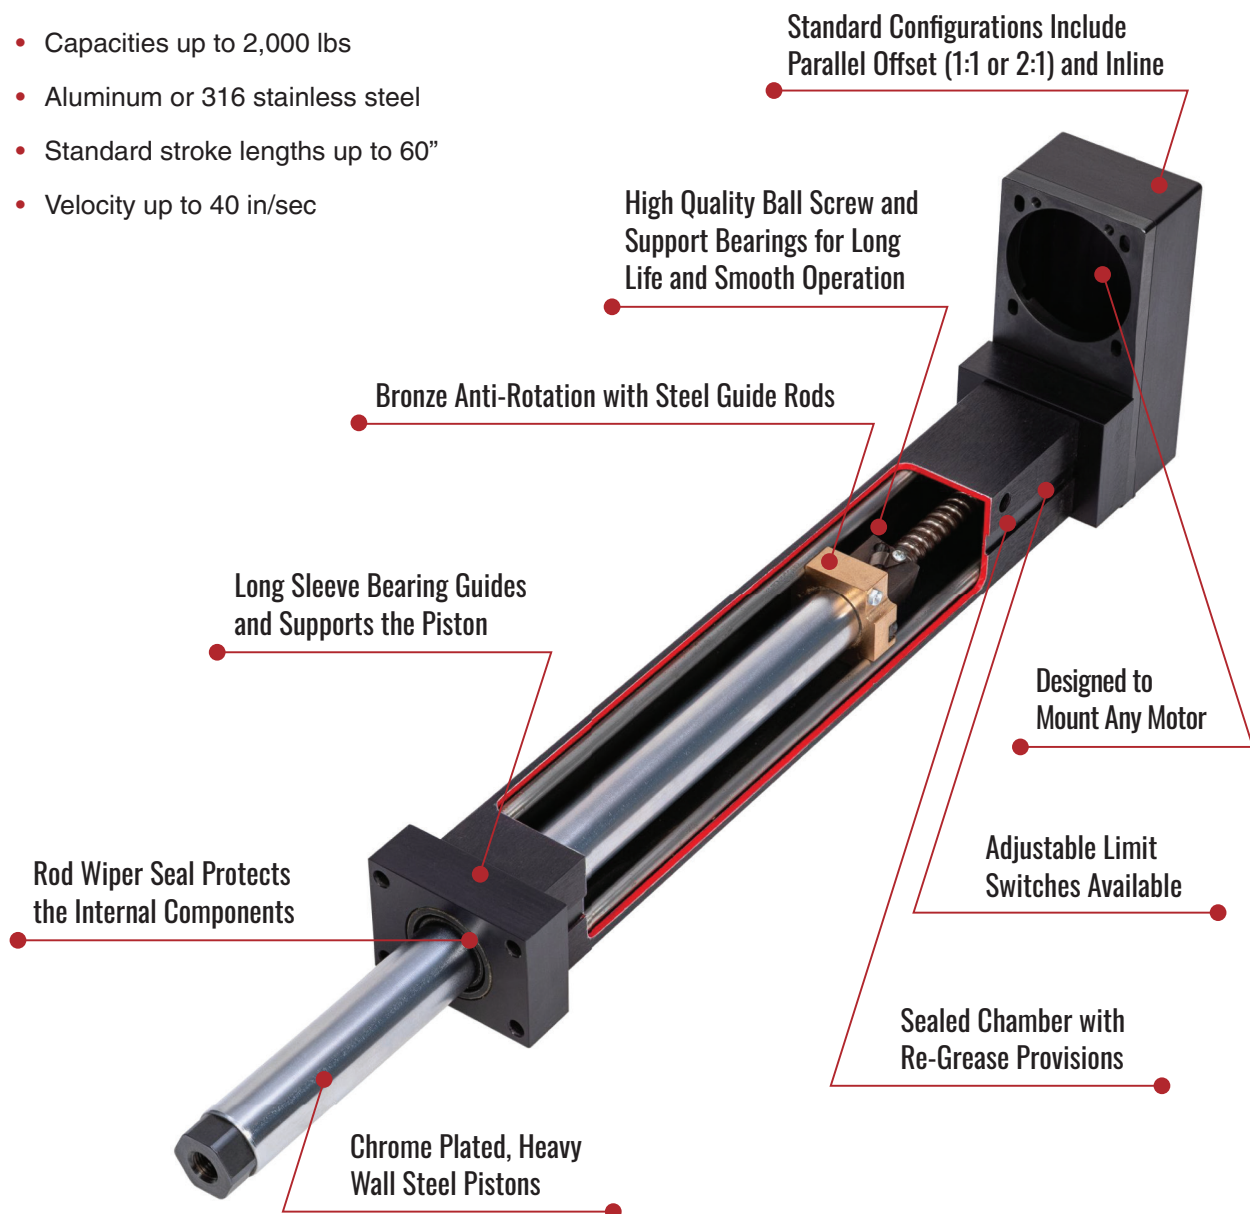

While other actuator designs force a particular motor decision, EDrive's linear actuators are designed to suit virtually any motor, gear box, or gearhead the customer chooses to use. Inline as well as parallel offset configurations are standard with 1:1 and 2:1 synchronous gearbelt ratios available.

Products available in Parallel Offset and Inline configurations.

## Tac Series Actuator

### EDrive's Tac Series Features:

- Capacities up to 2,000 lbs
- Aluminum or 316 stainless steel
- Standard stroke lengths up to 60"
- Velocity up to 40 in/sec

# Universal Actuator UA™

## COST EFFECTIVE, GENERAL PURPOSE AUTOMATION SOLUTION

EDrive's Universal Actuator UA series is designed to be easily incorporated into automation applications. These compact actuators feature an aluminum extrusion cylinder designed with industry-standard T-slots for quick mounting. Chrome piston with anti-rotation is standard and available in lengths up to 24 inches and speeds up to 50 in/sec. Quickly position limit switches along the cylinder. Ideal for a variety of industries and applications including Industrial Automation, Robotics, Packaging, Food, and Beverage.

### Key Features:

- Rated thrust up to 500 lbf
- Velocity up to 50 in/sec
- Designed with T-slot bracketing for quick mounting
- Sealed from contamination (IP54)
- Adjustable limit switches available
- Piston with internal anti-rotation

### *Ideal for a Variety of Applications Including:*

- Gating/Sorting/Diverting
- Assembly, Pick & Place
- Aligning, Product Changeover
- Conveyors, Fillers
- Pneumatic Replacement
- And More

# Tac VT™ Actuator

## COST EFFECTIVE, HIGH QUALITY, HIGH SPEED, HIGH FORCE

The Tac VT ball screw linear actuator series was developed to meet higher thrust load requirements at faster velocities with high quality and rugged durability. Using an aluminum body with steel components, chrome plated heavy wall steel piston, and steel/bronze anti-rotation, this linear actuator ensures rigid alignment.

### *Ideal for a Variety of Applications Including:*

- Damper Valve Control
- Motion Simulators
- Conveying / Diverting
- Material Handling
- Pneumatic Replacement
- And More

### **Key Features:**

- Developed for higher thrust load requirements and faster velocities
- Compact actuator with thrust up to 2,000 lbf
- Velocity up to 40 in/sec, stroke up to 24 inches
- Sealed chamber design with purge provisions to meet IP54
- 0.003 in/ft standard lead accuracy
- Standard backlash is 0.004 in maximum

# Tac VP™ Actuator

## IP69K STAINLESS STEEL, HIGH QUALITY, HIGH SPEED, HIGH FORCE

Tac VP series stainless steel linear actuators deliver all the performance advantages of our VT actuators with the added benefit of an IP69K rating and a contoured 316 stainless steel housing. Ideally suited for food-grade applications, severe environments and caustic washdown conditions.

### *Ideal for a Variety of Applications Including:*

- Food and Beverage Conveying / Diverting
- Volumetric Filling / Pumping
- Packaging
- Pneumatic Replacement
- And More

### Key Features:

## IP69K

- IP69K rated for high-pressure, high-temperature washdown
- 316 stainless steel contoured exterior
- Compact actuator with thrust up to 2,000 lbf
- Velocity up to 40 in/sec, stroke up to 24 inches
- Multiple motor/actuator mounting configurations available
- Piston with anti-rotation, sealed chamber design
- 0.003 in/ft standard lead accuracy
- Standard backlash is 0.004 in maximum

# Tac LS™ Actuator

## LONG STROKE, HIGH SPEED, HIGH FORCE

The Tac LS ball screw linear actuator series was developed for long stroke applications. This high quality, durable linear actuator is constructed using rugged aluminum alloy cylinders and chrome plated heavy wall steel pistons. Its small size, as well as the ease of adapting it to any standard unit mounting style, makes the Tac LS electric linear actuators a good fit in most linear motion industrial applications.

### *Ideal for a Variety of Applications Including:*

- Damper Valve Control
- Motion Simulators
- Conveying / Diverting
- Material Handling
- Pneumatic Replacement
- And More

### **Key Features:**

- Developed for long stroke applications
- Small size easily adapts to any standard unit mounting style
- Long stroke actuator with thrust up to 2,000 lbf
- Velocity up to 40 in/sec, stroke from 24 to 60 inches
- 0.003 in/ft standard lead accuracy
- Standard backlash is 0.004 in maximum

# Eliminator HD™ Actuator

## HEAVY DUTY, HIGH SPEED, HIGH FORCE, HIGH PRECISION

The Eliminator HD and HDL series Heavy Duty linear actuators provide strong, durable, and precise linear motion for industrial automation. The HD was designed to replace hydraulic actuators and thus “eliminate” many associated concerns, such as noise and fluid leakage, while providing high load, high speed, and high accuracy linear motion that is controllable, repeatable, and easy to adjust.

### *Ideal for a Variety of Applications Including:*

- Pressing / Punching
- Material Handling
- Metal Forming
- Parts Clamping
- Assembly
- Heat Staking
- Hydraulic Replacement
- And More

### **Key Features:**

- Rugged steel construction with durable anti-rotation feature
- Rated thrust up to 40,000 lbf
- High velocity up to 20 in/sec, stroke up to 48 inches
- Integrated load cell option provides continuous bi-directional measurement of applied loads (HDL model)
- 0.002 in/ft standard lead accuracy, 0.0005 in/ft optional lead accuracy
- Standard backlash is 0.003 in maximum; optional zero backlash is also available

# Eliminator HDL™ Actuator

## ELIMINATOR HD + INTEGRATED LOAD CELL

The Eliminator HDL combines all the precision features of the HD series with the additional benefit of an integrated load cell, providing continuous and accurate measurement of applied loads and force. This heavy-duty, rugged linear actuator provides a clean, simple, and economical solution for your high-speed precision thrust applications.

### *Ideal for a Variety of Applications Including:*

- Process Monitoring
- Prototyping
- Force Control
- Hydraulic Replacement
- And More

### Key Features:

- “Measure while you press” integrated load cell design
- Conforms to latest standard ASTM E4 for testing machines
- Rated forces up to 40,000 lbf
- High velocity up to 20 in/sec, stroke up to 48 inches
- Accurate to within 0.5% of rated force
- 0.002 in/ft standard lead accuracy, 0.0005 in/ft optional lead accuracy
- Standard backlash is 0.003 in maximum

<sup>1</sup> Maximum velocity and maximum screw speed may not be achievable at maximum stroke.

<sup>2</sup> Larger Motor or Gearhead Frames and longer stroke lengths are available upon request.

<sup>3</sup> All inertia values are at the input shaft and are representative of typical pulleys, bushings, couplers, etc. Actual values may vary due to motor selection.

<sup>4</sup> Weight values are for reference only and vary depending on configuration.

"U" Parallel offset configuration

"L" Inline configuration

## Ordering Information

For custom stroke lengths, contact Joyce/Dayton.

\* HDL201 is available with stroke lengths up to 12 in.  
 HDL302 – HDL304 are available with stroke lengths up to 36 in.  
 HDL404 – HDL406 are available with stroke lengths up to 42 in.  
 HDL508 – HDL740 are available with stroke lengths up to 48 in.  
 \*\* HDL201 – Std. Precision/Lead Accuracy is 0.0005 in/ft, 0.003 in. Backlash

# Eliminator SP™ Actuator

## IP69K STAINLESS STEEL, HEAVY DUTY, HIGH SPEED, HIGH FORCE

The Eliminator SP and SPL series Heavy Duty linear actuators offer all the performance advantages of our HD actuator, now with IP69K rating. Ideal for food and medical grade applications, this 316 stainless steel actuator is designed for high-pressure and high-temperature washdown conditions.

### *Ideal for a Variety of Applications Including:*

- Food Processing
- Volumetric Filling / Pumping
- Medical Equipment
- Pressing / Punching
- Hydraulic Replacement
- And More

### Key Features:

## IP69K

- IP69K rated for high-pressure, high-temperature washdown
- Contoured 316 stainless steel construction with hard chrome plated piston rod
- Durable anti-rotation feature
- Rated thrust up to 25,000 lbf
- Velocity to 20 in/sec, stroke up to 48 inches
- Integrated load cell option provides continuous bi-directional measurement of applied loads (SPL model)
- 0.002 in/ft standard lead accuracy, with 0.0005 in/ft option
- Standard backlash is 0.003 in maximum; optional zero backlash is also available

12: 12 in.					L: In-Line					X: No Switches									
18: 18 in.					U: Parallel Offset														
24: 24 in.																			
30: 30 in.																			
36: 36 in.																			
42: 42 in.																			
48: 48 in.																			

For custom stroke lengths, contact Joyce/Dayton.

**\* Standard Stroke Lengths**

- SP201 stroke lengths up to 12 in.
- SP302 – SP304 stroke lengths up to 36 in.
- SP404 – SP406 stroke lengths up to 42 in.
- SP508 – SP740 stroke lengths up to 48 in.

**\*\* Self-Aligning Coupler**

Not available for SP625

**\*\*\* Precision/Lead Accuracy**

- SP201 – 0.0005 in/ft, Zero Backlash is standard
- SP302, SP404 – Zero Backlash not available

**\*\*\*\* IP69K Exceptions**

Self-Aligning Coupler and Spherical Rod Ends not rated  
Sealed Limit Switches, IP65 rated

# Eliminator SPL™ Actuator

## IP69K STAINLESS STEEL ACTUATOR + INTEGRATED LOAD CELL

The Eliminator SPL offers all of the performance advantages of our SP actuator, including an IP69K rating. Ideal for food and medical-grade high-pressure, high-temperature washdown applications. These actuators include an integrated load cell, providing continuous and accurate measurement of applied loads and force.

### *Ideal for a Variety of Applications Including:*

- Process Monitoring
- Prototyping
- Force Control
- Hydraulic Replacement
- And More

### Key Features:

## IP69K

- IP69K rated for high-pressure, high-temperature washdown
- “Measure while you Press” integrated load cell design
- Countoured 316 stainless steel construction with hard chrome plated piston rod
- Durable anti-rotation feature
- Loads and forces up to 25,000 lbf, High-velocity to 20 in/sec, stroke to 48 inches
- Accurate to within 0.5% of rated force
- 0.002 in/ft standard lead accuracy, 0.0005 in/ft optional lead accuracy
- Standard backlash is 0.003 in maximum

# Eliminator SS™ Actuator

## EXTREME SPEED CAPABILITY IN AN ELIMINATOR PLATFORM

The Eliminator SS Super Speed actuator is the linear solution for those automation applications demanding extremely high-speed motion. This combination of high thrust capacity, fast actuation, and precision motion are all provided in a strong, durable, actuator built on the Eliminator HD platform and adaptable to your servomotor.

### *Ideal for a Variety of Applications Including:*

- Timber Processing
- Cut-Off Applications
- Packaging
- Hydraulic / Pneumatic Replacement
- And More

### **Key Features:**

- Rugged steel construction with durable anti-rotation feature
- Rated thrust up to 2,000 lbf
- Extreme speed capability up to 63 in/sec, stroke up to 48 inches
- Sealed chamber design with purge provisions to meet IP54
- 0.005 in/ft standard lead accuracy
- Standard backlash is 0.005 in maximum; optional zero backlash is also available

# SPECIFICATION CHART FOR THE ELIMINATOR SS ACTUATOR

# Eliminator SD™ Actuator

## EXTREME THRUST CAPABILITY IN ELIMINATOR HD PLATFORM

The Eliminator SD super duty linear actuator provides extreme thrust capacity for your high thrust industrial applications. Achieve the perfect high precision/high load capacity solution when you combine your servomotor with this heavy-duty steel actuator.

### *Ideal for a Variety of Applications Including:*

- Heavy Pressing / Punching / Staking
- Heavy Lifting
- Riveting / Fastening
- Cycle Testing
- Clamping / Stamping
- Hydraulic Replacement
- And More

### **Key Features:**

- Rugged steel construction with durable anti-rotation feature
- Extreme thrust capacity up to 100,000 lbf
- Velocity up to 12 in/sec, stroke up to 48 inches
- Combines with your servomotor to achieve the perfect high-precision/high-load capacity
- 0.002 in/ft standard lead accuracy
- Standard backlash is 0.003 in maximum

# ORDERING GUIDE FOR THE ELIMINATOR SD ACTUATOR

## Ordering Information

For custom stroke lengths, contact Joyce/Dayton.

\* Rear Trunnion not available for SD999

# Glossary

## Alignment

Alignment of the actuator, parallel to the line of motion, is critical. Also, the end effector connection must be designed to prevent any transfer of bending moments back to the actuator.

## B10 Life

B10 Life is expressed in total revolutions or inches of travel a properly maintained ball screw will operate under a rated load. 90% of all systems operated at this rated load will meet or exceed this rating. Although 10% may not reach a million inches, 50% could exceed 5 million inches.

Life under load (B10 life) is predictable; severe load applications can generally be compensated for by providing additional capacity.

## Contamination

Contamination of the ball screw system is the leading cause of premature failure. Providing a continuous, low pressure, air purge to the system is a good way to ensure clean operation.

## Force

Force, when calculating the required force, consider the force to accelerate the mass as well as the force to overcome the friction and the applied force. For sizing the system, consider the maximum force and duration. For evaluating life under varying loads, calculate the root mean cube equivalent load which weights the different load levels by the typical length traveled under that load.

## Impact

Impact is unacceptable to ball screws as well as anti-friction bearings. Severely shortened life and/or catastrophic failure are the results. Avoid impact or provide a mechanical system to buffer the ball screw assembly from shock loads.

## IP69K Rating

IP69K is the highest rating available on the internationally recognized scale for ingress protection (IP) against solids and liquids. EDrive SP, SPL and VP actuators have undergone rigorous testing to satisfy these IP69K standards making them ideal for food processing and medical applications requiring high-pressure and high-temperature washdown.

## Linear Velocity

Linear velocity is limited by (1): the maximum ball screw rpm without “whipping” of the ball screw shaft; (2) critical speeds for the ball nut assembly (beyond which the motion of the balls becomes erratic and performance life suffers).

## Lubrication

Good lubrication is essential. Do not mix lubricants. Refer to the Service Manual to determine the correct lubricant. Important: Oil systems are shipped dry. Lubrication lines must be connected, and the reservoir and all connections filled prior to operating the actuator. Grease systems come pre-lubricated but should be periodically inspected (if applicable) to ensure adequate lubricant to critical areas of the ball screw.

## Maximum Acceleration

Maximum acceleration of ball screw assembly is approximately 32 ft/s<sup>2</sup>, above this level, unit life becomes shorter and less predictable.

## Side Loads

Side loads are undesirable. Almost any force not coaxial to the actuator compromises potential life.

## Stiffness

System stiffness is an essential attribute of high accuracy positioning systems. Specifying 0.0005 inch positioning accuracy and repeatability without considering spring rate may result in disappointing performance. For precision light duty applications a spring constant of 1 x 10<sup>6</sup> lbs/in is acceptable and a range of 3 x 10<sup>6</sup> to 6 x 10<sup>6</sup> lbs/in may be necessary for higher load applications.

# Technical FAQ

## How do I install/tension the gearbelt and how tight should it be?

Belt tensioning procedures vary from product to product. Please refer to the Service Information section of the website for more specific information.

## How do I lubricate my actuator?

Lubrication methods and the choice of lubricant may vary from product to product. Please refer to the Service Information section of our website for this information.

## What is the rated operating temperature range?

The normal rated operating temperature range for most EDrive actuators is -20°F to 175°F. For help specifying actuators which require operation outside of this temperature range contact [sales@joycedayton.com](mailto:sales@joycedayton.com) or speak with our customer service team at (937) 294-6261.

## What does B10 Life mean?

B10 life is expressed in total revolutions or inches of travel a properly maintained ball screw will operate under a rated load. 90% of all systems operated at this rated load will meet or exceed this rating. Although 10% may not reach a million inches, 50% could exceed 5 million inches. Life under load (B10 life) is predictable; severe load applications can generally be compensated for by providing additional capacity.

## Does EDrive offer an integrated load cell option for actuators?

Yes. EDrive offers an Integrated Load Cell option for many of our products. This option combines force measurement with heavy-duty and precise linear motion. It provides a clean, simple, rugged, and economical capability to directly and continuously monitor axial force while simultaneously applying that force. Examples of products with the Load Cell option include HDL and SPL actuators.

## IP69K Rating - What does it mean and why is it preferred?

IP69K indicates the highest rating available on the internationally recognized scale for classifying ingress protection against dust and high-temperature, high-pressure liquids. Products with IP69K protection are ideal for use in industries such as Food Processing and Medical Equipment applications where equipment must routinely withstand rigorous washdown procedures.

# How to Select an Actuator

## Selection Guidelines

### 1. Define the Motion Profile

Gather all the necessary application details including application stroke length, loads and forces, total cycle time, and duty cycle to define the required velocities in forces in each of the motion profile segments. The EDrive application worksheet can be used to gather this necessary information.

### 2. Calculate Equivalent Load

Using the segment stroke lengths and forces, calculate the equivalent load of the application using the formula found in the “How to Calculate Equivalent Load” section.

### 3. Select Actuator Size

Select an actuator size capable of the required stroke, peak linear velocity, and peak force from the application requirements. Verify that the applications peak linear velocity as well as peak force do not exceed the max values of the size actuator selected. Standard stroke lengths are available in increments of 6 inches, but in-between lengths are available upon request.

### 4. Calculate B10 Life

Using the calculated equivalent load, determine the estimated B10 life of the selected actuator size from the Life Vs. Load charts. It is possible the actuator selection may need to be adjusted to achieve a desirable B10 life.

### 5. Environmental Considerations

Determine the environmental requirements of the application. If ingress protection against dust and/or water is needed, select a series actuator with a higher IP rating. If the ambient temperature of the application is not within the operating range of the selected actuator, contact Joyce/Dayton.

### 6. Select a Motor Configuration

Select a parallel offset or inline motor mounting configuration. If parallel offset, select between a standard 1:1 or 2:1 reduction ratio.

### 7. Establish Total Torque Requirements

Total system inertia values can be found in the product spec charts. Calculate the peak and the RMS torque and speeds required from the motor for the motion profile.

### 8. Select a Motor

Use the calculated torque and speed values to select a motor and reduction ratio (if applicable) to select an appropriate motor for the application. The motor part number is to be included at the end of the EDrive part number string.

### 9. Select Actuator Mounting and Rod End Options

Actuator mounting and rod end options can be found in the dimensioned drawings section for each product line. When selecting a trunnion mounted actuator, select either front trunnion or rear trunnion as the actuator will not come equipped with both. For custom mounting options contact Joyce/Dayton.

### 10. Select Optional Position Sensors

The 6 standard sensor options to choose from include reed, PNP, and NPN switch types all offered as normally open or normally closed with 6 foot flying leads.

### 11. Configure Part Number

Ordering guides are found with each product. Based upon all of the selections made in the previous steps, configure the complete actuator part number to send to EDrive for quoting.

# Calculations

## Equivalent Load

The equivalent load is the average force over the working stroke, weighted proportionately to the distance traveled. For constant force loads, the equivalent load is the same as the typical or average load. Where forces vary due to gravity, angle of actuator, acceleration and deceleration, friction, and changing dynamic loads at different positions, it is best to determine the equivalent load in order to most accurately predict the B10 life of the actuator.

$$F_e = \sqrt[3]{\frac{L_1(F_1)^3 + L_2(F_2)^3 + L_3(F_3)^3 + L_4(F_4)^3 + \dots + L_n(F_n)^3}{L}}$$

$F_e$  = Equivalent Load (lbf)

$F_n$  = Calculated force for segment "n" (lbf)

$L_n$  = Travel distance for segment "n" (in)

$L$  = The total travel of all segments (in)

## Drive Torque

Edrive considers its ball screw actuators to be 90% efficient. When a 2:1 belt ratio is used, the required input torque is halved. Due to variations in actuator efficiency, it is recommended when sizing a motor to have some excess torque.

$$T_d = \frac{F \times L}{2 \pi \epsilon}$$

$T_d$  = Drive Torque at Ball Screw (in-lb)

$F$  = Output Force (lbf)

$L$  = Ball Screw Lead (in)

$\epsilon$  = Efficiency

## Holding Torque

Due to the high efficiency of the ball screw, torque is required to hold a stationary load. Otherwise the actuator will freely backdrive. If holding position without power to the motor is required, a motor brake is recommended. When a 2:1 belt ratio is used, the required holding torque is halved. Due to variations in actuator efficiency, it is recommended when sizing a motor to have some excess torque.

$$T_h = \frac{F \times L \times \epsilon}{2 \pi}$$

$T_h$  = Holding Torque at Ball Screw (in-lb)

$F$  = Output Force (lbf)

$L$  = Ball Screw Lead (in)

$\epsilon$  = Efficiency

## Drive RPM

When a 2:1 belt ratio is used, the required input RPM is doubled.

$$RPM = \frac{V \times 60}{L}$$

RPM = Rotations Per Minute

$V$  = Linear Velocity of Actuator (in/sec)

$L$  = Screw Lead (in)

# Wiring Diagrams

## FB6402 HD Load Cell Wiring Diagram

Rated Output, Typical	2 mV/V
Combined error	0.25% F.S.
Non-Repeatability	0.05% F.S.
Zero Balance	1% R.O.
Temperature Range Compensated	50°F to 120°F
Temperature Effect, Output	0.0008% of load / °F
Temperature Effects, Zero Balance	0.02% / R.O. / °F
Bridge Impedance, Typical	700 ohms
Excitation Voltage, Typical	10 VDC or VAC rms
Excitation Voltage, Maximum	15 VDC or VAC rms
Insulation resistance	>5,000 megohms at 50 VDC
Overload, Safe	150% over Capacity
Overload, Ultimate	200% over Capacity
Deflection at Rated Capacity, Approx.	0.0015 inch
Construction	Tool Steel
